### 4 Scientific Research

#### 4.1 Summary

The main area of my research is the design and implementation of programming languages, with a focus on statically-typed languages. I believe that static types can contribute significantly to programmer productivity by allowing her to (a) eradicate bugs early in the development process, (b) express complex properties about her programs, and (c) guide the compiler to automatically generate repetitive pieces of code (boilerplate).

#### 4.2 Research Topics and Interests

- Programming languages and systems
- Compiler construction
- Domain-specific Languages
- Functional languages, Haskell
